

ACTIVITY SHEET

CSS BACKGROUND PROPERTIES

Grade 11 – TechPro | Visual Studio Code

Name: <u>Ramo, Jeric Y.</u>	Grade & Section: <u>11 Bell</u>
Date: <u>Sep / 22 / 2026</u>	Score: <u> </u> / 50

I. Learning Objectives

- ☐ Explain the purpose of CSS background properties.
- ☐ Apply background-color and background-image.
- ☐ Control background repetition, position, size, and attachment.
- ☐ Use the CSS background shorthand property.
- ☐ Create and style a simple webpage using Visual Studio Code.

II. Materials and Reference

Computer • Visual Studio Code • Web browser • Internet connection

Reference: https://www.w3schools.com/css/css_background.asp

III. CSS Background Properties

Property	Purpose
background-color	Sets the background color.
background-image	Adds a background image.
background-repeat	Controls whether the image repeats.
background-position	Sets the image position.
background-size	Controls the image size.
background-attachment	Controls scrolling/fixed behavior.
background	Shorthand for background settings.

IV. PART A – Create Your Project

Create a folder named CSS_Background_Activity.

Open the folder in Visual Studio Code.

Create index.html.

Create an images folder and place an appropriate background image inside it.

Project structure:

```

CSS_Background_Activity/
├── index.html
└── images/
    └── background.jpg

```

V. PART B – Create Your First Webpage

Inside index.html, create the basic HTML structure and add:

```

<h1>My CSS Background Activity</h1>
<p>I am learning how to use CSS background properties using Visual Studio Code.</p>

```

Checkpoint: ☐ Heading displayed ☐ Paragraph displayed ☐ Page opens in browser

VI. PART C – Background Color

Add CSS inside <head>:

```
body {
    background-color: lightblue;
}
```

Challenge: Change the color to lightgreen, lightyellow, lightpink, or a HEX color.

Color selected: lightgreen HEX/RGB/Color name: 144, 238, 144

VII. PART D – Background Image

Use: background-image: url("images/background.jpg");

Make sure the filename and extension match exactly.

VIII. PART E – Background Repeat

Experiment with: repeat • no-repeat • repeat-x • repeat-y

1. What happens when you use repeat?
the image repeated infinitely

2. What happens when you use no-repeat?
only one copy of the image was displayed

3. What does repeat-x do?
it repeated the images horizontally

4. What does repeat-y do?
repeated the images vertically

IX. PART F – Background Position

Try: top, center, right top, and center center.

My selected position: center

X. PART G – Background Size

Experiment with cover, contain, and a fixed size such as 300px.

1. What happens when you use cover?
it filled my display with the background picture, inline with the image's resolution

2. What happens when you use contain?
image stayed in the middle, visibly smaller

3. Which value do you prefer for a webpage background? Why?
cover, since it automatically fills up my screen with the background image

XI. PART H – Background Attachment

Add enough content to scroll, then test background-attachment: fixed; and background-attachment: scroll;

Observation:

with fixed, the picture stay as is on my screen while scrolling

with scroll on the otherhand, the whole page including the background scrolled with all the other texts

XII. PART I – Combine the Properties

Create your own design using at least five background properties.

```
body {
    background-color: lightgreen;
    background-image: url(" images/background.jpg");
    background-repeat: no-repeat;
    background-position: center;
    background-size: cover;
    background-attachment: fixed;
}
```

XIII. PART J – CSS Background Shorthand

Combine several settings using the background shorthand property.

```
body {
    background: #eeeeee url("images/background.jpg") no-repeat center;
}
```

My shorthand version:

background: rgb(144, 238, 144) url('images/background.jpg') no-repeat center / cover fixed;

XIV. PART K – Mini Project: MY TECHPRO PROFILE

Create a simple technology-themed personal webpage containing:

- ☐ MY TECHPRO PROFILE heading
- ☐ Your name, grade/section, favorite technology, favorite programming language, and dream career
- ☐ background-color, background-image, background-repeat, background-position, background-size, background-attachment, and background shorthand
- ☐ Readable text and a creative, organized layout

XV. Questions for Understanding

1. What is the purpose of CSS background properties?
to change or modify how backgrounds are displayed within your page
2. What is the difference between background-color and background-image?
background color just sets a solid color and background images replaces the soi
3. What is the purpose of background-repeat?
makes the background display infinitely, repeatedly displaying itself to fill your screen
4. Why would a web designer use background-size: cover?
to make sure the image covers the whole page
5. What is the purpose of background-attachment?
to control whether the background is fixed on one point or scrolls along with other texts
6. Why is the correct image file path important?
to avoid the image not displaying
7. What is the advantage of using the background shorthand property?
to quickly type out all the attributes you'd want in a background image

XVI. Reflection

Today I learned that CSS backgrounds can...
applying different attributes can make or break your webpage

The CSS property I found easiest to use was...
background-color since its just solid colors you can get easily with built in VS Code tools

The CSS property I found most challenging was...
probably with no-repeat since it kind of confused me a little bit at first (until i zoomed out the webpage, then i saw what it does

One thing I want to improve in my webpage is...
finding the right combinations of attributes to they all blend in together

XVII. Submission Requirements

Submit the project folder and screenshots showing (1) your Visual Studio Code code and (2) your completed webpage.

File naming: Surname_FirstName_CSSBackground

Example: Delacruz_Juan_CSSBackground

XVIII. Rubric – 50 Points

Criteria	Points
----------	--------

TECHPRO • GRADE 11 • CSS BACKGROUNDS

Correct HTML structure	5
background-color	5
background-image	5
background-repeat	5
background-position	5
background-size	5
background-attachment	5
Background shorthand	5
Creativity and layout	5
File organization and submission	5
TOTAL	50

Teacher's Check: ☐ Activity completed ☐ Required CSS properties demonstrated ☐ Project submitted
