

GRADE 11 TECHPRO ACTIVITY SHEET

CSS PADDING AND BOX-SIZING

Name	Ramo, Jeric Y.	Date:	9 / 29 / 2026
Grade & Section:	11- Bell	Score:	

Learning Objectives

- Explain what CSS padding does.
- Use the padding property to create space inside an element.
- Use padding-top, padding-right, padding-bottom, and padding-left.
- Use one-, two-, three-, and four-value padding shorthand.
- Explain the difference between content-box and border-box.
- Use box-sizing: border-box in a simple webpage.
- Create a simple TechPro information card using padding and box-sizing.

Instructions

- Create the project folder CSS_Padding_Activity.
- Open the folder in Visual Studio Code.
- Create a file named index.html.
- Type the code exactly as instructed, then save the file.
- Open index.html in a web browser and observe the changes.
- Follow each task in order and answer the review questions before submitting.

PART A — Create the HTML File

Create index.html and enter this starter code:

```
<!DOCTYPE html>
<html>
<head>
  <title>CSS Padding Activity</title>
  <style>
    body {
      font-family: Arial, sans-serif;
    }
  </style>
</head>
<body>

  <h1>My CSS Padding Activity</h1>

</body>
</html>
```

PART B — Basic Padding

Inside the <style> section, add the following class. Apply it to a paragraph in the <body>.

```
.box {
  border: 3px solid maroon;
  padding: 20px;
}
```

Add this inside <body>:

```
<p class="box">This paragraph has 20 pixels of padding.</p>
```

Observe the space between the text and the border.

PART C — Change the Padding

Change padding from 20px to 40px.

```
padding: 40px;
```

Question: What happens to the space between the text and the border? The space got wider and bigger

PART D — Individual Padding Sides

Replace the padding rule with these four properties:

```
padding-top: 10px;
padding-right: 20px;
padding-bottom: 30px;
padding-left: 40px;
```

Observe that each side can have a different amount of inner space.

PART E — Padding Shorthand

Use the four-value shorthand. The values are applied in this order: top, right, bottom, left.

```
padding: 10px 20px 30px 40px;
```

Remember: 4 values = top, right, bottom, left.

PART F — Easy Shorthand Practice

Try each example one at a time. Observe which sides change.

```
padding: 20px;
padding: 20px 40px;
padding: 10px 20px 30px;
padding: 10px 20px 30px 40px;
```

Quick guide: 1 value = all sides; 2 values = top/bottom and left/right; 3 values = top, left/right, bottom; 4 values = top, right, bottom, left.

PART G — Padding and Width

Create this box and observe its size in the browser:

```
.box {
  width: 300px;
  padding: 25px;
  border: 5px solid maroon;
}
```

Under the default content-box model, padding and border are added to the declared width.

PART H — Use box-sizing: border-box

Add box-sizing: border-box to the same rule:

```
.box {
  width: 300px;
  padding: 25px;
  border: 5px solid maroon;
  box-sizing: border-box;
}
```

Observe the difference. With border-box, the declared width includes the content, padding, and border.

PART I — Compare the Two Box Models

Property	content-box	border-box
Declared width	Content only	Content + padding + border
Padding included in width?	No	Yes

PART J — Mini Project: My TechPro Information Card

Create a simple information card using HTML and CSS. Your card should contain:

- A title: My TechPro Profile
- Your name
- Your grade and section
- One sentence about what you are learning in ICT
- A border
- Padding of at least 20px
- A fixed width
- box-sizing: border-box

Suggested CSS:

```
.card {  
  width: 350px;  
  padding: 20px;  
  border: 3px solid maroon;  
  box-sizing: border-box;  
}
```

Check Your Work

- ☐ I created the CSS_Padding_Activity folder.
- ☐ I created and saved index.html.
- ☐ I practiced basic padding.
- ☐ I practiced individual padding sides.
- ☐ I practiced padding shorthand.
- ☐ I tested content-box and border-box.
- ☐ I completed the TechPro Information Card.
- ☐ I saved my final work.

Review Questions

1. What is CSS padding?

Answer: The space between the actual element inside a box and its border

2. What is the difference between padding and border?

Answer: Border is the visible box line and padding is the space between

3. What do padding-top, padding-right, padding-bottom, and padding-left control?

Answer: They allow you to control specific sides of the padding

4. What is the order of four padding shorthand values?

Answer: top, right, bottom, left.

5. What is the default box-sizing value?

Answer: content-box

6. What does box-sizing: border-box do?

Answer: it controls whether it should include padding and borders in those sides or not

Submission

- Save your final index.html file.
- Make sure the webpage displays correctly in a browser.

Quick Review

Padding = space inside the border, around the content.

4-value shorthand = top, right, bottom, left.

content-box = declared width applies to content only.

border-box = declared width includes content, padding, and border.
